

HOW COULD THE ACTIVE DIRECTORY CHECK HELP YOUR BUSINESS?

Few organisations regularly review or clean up their Active Directories.

All organisations naturally evolve, either through organic growth or through acquisition. You may recognise the process of constant and progressive change which often results in teams gaining and retaining access to information long after they need it.

You may also recognise the situation where trainees may move around a company to gain experience, after 3 months they may have access to information across a variety of departments from Finance, to Sales and Marketing, to Product Development. This is known as the "**Apprentice Effect**".

If access rights are not effectively managed some employees could easily end up with dangerous levels of access; more than their line manager, the leadership team or even the CEO. Not an ideal situation!

The Issue

Active directory is critical to most organisations IT operations, controlling user access to all applications and data. And yet it is complex, difficult to manage or rationalise, and even harder to effectively audit to detect and correct wandering permissions and access controls. The chaos needs to stop!

The Solution

8MAN is a unique product that offers an in depth analysis of access management issues across your network. The focus of this review is on who has access to what, and how it is that they have that access.

The **8MAN Health Check** will provide you with actionable information on current access rights, issues and risks, and help you identify possible solutions that will allow your organisation to significantly reduce risk. The **8MAN Health Check** can be completed in one day, with one of our qualified engineers undertaking an in depth analysis of your **Active Directory** environment including a comprehensive summary of your file server environment. The final report summary can form the basis of your own internal audit preparations.

8MAN

What do I need to do to prepare?

We are here to help you every step of the way. Once we have had our initial consultation the preparation is easy and simple:

- First complete a pre-Health Check survey to ensure the engineer understands your environment.
- Provide a point of contact for the Health Check who will be available for an initial preparation and set up session.
- Download the required software from the Guardian FTP site.
- Identify the Active Directory domain and up to five file servers.

Why work with Guardian Technologies?

Our team has over 30 years of experience within the IT data security sector, so we are perfectly placed to provide you with the right solution to solve your individual data security challenges.

We can also:

- Move quickly to meet your individual business requirements.
- Offer an individual consultation service to help make the right proposals for your business.
- Provide excellent implementation support.
- Ensure your business continues to be protected from data security threats.

The cost for this assessment is just **£5,000** for the whole package

This includes a license to use the 8MAN software for the duration of the assessment PLUS a skilled Guardian resource to install, configure and run the scans, generate relevant reports and interpret the results.
